Process Control and Automation

1

1
DISTRIBUTED CONTROL SYSTEMS AND PROCESS PLANTS 5

Partial List of Suppliers 5
Definitions 5
Summary 5
Introduction 6
- Plant Structure 6
- Plant Organization 6
- Plant Operators 7
- Plant Maintenance 8
- Laboratories 8
- Evolution of Distributed Control Systems 8

Control System Classification 10
- Safety Systems 12
- Continuous Processes 14
- Self-Regulating Processes 15
- Integrating Response 16
- Batch Processes 17
- Fed-Batch Processes 17
- Profile Control 19

Distributed Control System Architecture 20
- Functional Components 20
- Process Control Networks 21
- Operator Console 22
- Control System Configuration 23
- Input/Output Cards 24
- Conventional IO 25
- Diagnostics 25
- Redundancy 25
- Historical Data 25
- Security 25
- Integration 26
- Alarms, Alerts, and Alarm Management 26
- Alert Processing 26
- Alarm Management 27

Meeting Control Performance Requirements 27
- Control Execution Rates 28
- IO Processing Delays 28
- Anti-Aliasing Filtering 28

Digital Control System Networks 29
- DCS Topologies 29
- Corporate Network 31
- Plant Network 31
- Process Control Networks 32
- Area Control Networks 33
- Field Networks 33
- Wireless Networks 33

Network Integration 34
- Division of Network into Process Network and Office Network 34
- IT Security 34
- Office Environment 34
- Plant Environment 34
- Process Control Device Connectivity 36
- Wireless Networks and Devices 36
- Field Instruments 36
- Equipment Packages 36

Future Trends 37
Conclusions and Comments 38
Symbols 38
Abbreviations 38
Bibliography 39

2
NETWORKS IN PROCESS AUTOMATION: HARDWARE STRUCTURES AND INTEGRATION OF PROCESS VARIABLES INTO NETWORKS 40

Partial List of Suppliers 40
Introduction 40
Enterprise Asset Management 40
Information Requirement and Flow 41
Control 41
Plant Management 41
Enterprise Management 43
Communication Models 43
Communication Hierarchy 44
Network Requirements 44
OSI Reference Model 45
OSI Implementation 45
Control and Fieldbus Protocols 46
Wireless Networks 47
Process Network Fundamentals 49
Transmission Medium 49
Topologies 50
Transmission 51
Logical Link and Media Access Control 51
Media Access Methods 52
Communication Relationships 53
Network Layers 53
Transport Layer 54
Application Layer 54
Industrial Networks 55
Programmable Logic Controllers 55
Distributed Control System 56
SCADA Systems 57
Network Security 58
Network Components 58
Fieldbus Networks 59
AS-Interface 60
4–20 mA/HART 60
PROFIBUS DP/PROFIBUS PA 61
FOUNDATION Fieldbus 62
MODBUS 63
ControlNet 63
Ethernet 64
Wireless 65
Field Instrumentation 65
Safety Integrity Level 65
Hazardous Areas 66
Integration of Process Variables 66
Device Integration 66
Interchangeability of Devices 67
Engineering 67
OPC Server 67
Plant Asset Management 68
Net-Wide Data Exchange 69
Step 69
Product Attributes 69
XML 69
Conclusions 70
References 70
Bibliography 71

3
INSTRUMENTATION IN PROCESSES AND AUTOMATION 72

Introduction 72
Measured and Key Variables 73
Instrumentation Design Goals 73
Cost Optimal Accurate Sensor Network 74
Example 74
Parameter Estimation 75
Precision Upgrade 75
Example 76
Resource Reallocation 77
Example 77
Reliable Sensor Networks 78
Repairable Sensor Networks 79
Example 79
Robust Sensor Networks 80
Example 80
Example of Accuracy-Constrained Networks 81
Design of Economic Value–Optimal Sensor Networks 81
Example 82
Design of Sensor Networks for Process Fault Diagnosis 82
Design of Sensor Networks for Process Fault Resolution 83
Design of Sensor Networks for Process Fault Diagnosis—Value Perspective 84
Design of Sensor Networks for Automation 84
Example of Automation-Based Cost-Optimal Sensor Networks 85
Conclusions 85
Nomenclature 85
References 87

4
PROGRAMMABLE LOGIC CONTROLLERS 90

Partial List of Suppliers 90
Introduction 90
Types of Processes 90
Evolution of Automation 90
Programmable Logic Controllers 91
Input Modules 91
Output Modules 92
Central Processing Unit 93
Specifications of CPU 94
Memory 94
Power Supply 94

Programming Devices 94
PLC Programming 94
Instructions Used in Ladder Programming 95
Timers 95
Counters 97
Recent Trends in PLCs 98
Abbreviations 100
Bibliography 100

5
SCADA—SUPERVISORY CONTROL AND DATA ACQUISITION SYSTEM AND AN EXAMPLE 101

Partial List of Suppliers 101
Introduction 101
Part 1—SCADA HMI Essentials 101
SCADA Components 102
Field I/O 102
Logic Solvers 103
Networks and Network Components 103
SCADA Configuration and the Software 103
Hardware Configuration 103
Point Loading 103
I/O Allocation 103
Logic Development 103
Compilation and Codes 104
Connecting to CPU and Downloading the Codes 104
Logic Simulations and Pretests 104
HMI Hardware 104
HMI Software 104
HMI Concept Development 105
Color Schemes 105
Navigation Schemes 105
Preliminary Configurations 105
Middleware Tag Definitions and Configurations 105
Tag Database Loading 105
Creation of Building Blocks 105
Creation of Home Screen and Process Screens 105
Creation of Control Panels or Pop-Ups 105
Creation of Set-Up Screens 106
Creation of Alarm Management 106
Creation of Historical Trends 106
Creation of Reports 106
Basic Navigation Test 106
Connecting with Controllers 106
Testing Set of Screens 106
Pre-FAT Test of Hardware and HMI 106
Engineering Work Stations 106
Part 2—A Practical Example of SCADA-HMI 106
System Definition 106
Master HMI Display Panel Operation 107
Alarm Log Display Screen 111
Historical Log 111
Auxiliary HMI Display Screen 111
Sequence of Operations 111
EFSO Sequence of Operation 111
HMI Screens for EFSO Sequence 112
Bypass Sequence of Operation 114
HMI Screens for Bypass Sequence 115
Communication Failure 116
Bibliography 129

6
INTELLIGENT INSTRUMENTS AND SENSORS: ARCHITECTURE, SOFTWARE, NETWORKS, PROTOCOLS, AND STANDARDS 130

Introduction 130
Intelligent Instruments 130
Examples of Intelligent Instruments 130
Intelligent Sensors 132
Intelligent Sensor Characteristics and Networking 132
IEEE 1451 Standard 132
Transducer Electronic Data Sheet 133
Network Capable Application Processor 133
Smart Transducer Interface Module 134
Communications of Intelligent Sensors 134
Intelligent Sensor PnP Capability 135
Management of Intelligent Sensor Networks 136
Use of SNMP Protocol for Intelligent Sensors in Networks 136
Basic Encoding Rules 138
Standardized Reference to Integrated Intelligent Sensors 139
References 139

7
CALIBRATIONS IN PROCESS CONTROL 141

Partial List of Service and Software Providers 141
Introduction 141
Definitions 141
Errors and Uncertainties in Calibrations 141
Benefits of Calibrations 142
Calibration Methods and Procedures 142
Calibration Methods 143
Calibration Personnel 143
Calibration Laboratories 144
Calibration Institutions 144
Calibration Records 144
Calibration Software Support 144
Use of Spreadsheets 145
Calibration Management Software 145
Integration of Calibration with CMMS 145
Cost of Calibration 145
Measurement Assurance Planning 146

Literature on Calibration 146
Trends in Calibrations 146
Electronic Calibration 146
Self-Calibrations 147
Remote and e-Calibration 147
Internet Calibration 147
Internet Calibration Examples 148
Calibration Examples 148
Bibliography 149

8
STANDARDS IN PROCESS CONTROL AND AUTOMATION 150

Background 150
Standards Organizations 150
Links of Standards Organizations 152
Development of Standards 152
International Standards Organization 152
Structure of ISO 153
Obtaining ISO Standards 154
Obtaining Standards 154
Using the Standards 155
Examples of Standards 155
Software Standards 155
Types of Software Standards 155
Bibliography 157

9
AUTOMATION AND ROBOTICS IN PROCESSES 158

Partial List of Suppliers 158
Introduction 158
Automation and Robotics 158
Fixed Automation 159
Programmable Automation 159
Flexible Automation 160
Robot-Based Industrial Applications 160
Implementations of Robots 161
Work-Cell Controls and Industrial Robot Programming 164
Conclusions 168
References 168
